

Problem 1 (2 points)

What will this code print?

```
temperature = 75
if temperature > 80:
    print("Hot")
elif temperature > 60:
    print("Warm")
else:
    print("Cold")
```

Problem 2 (2 points)

Write the correct syntax to start an if statement that checks if a variable

`score` is greater than or equal to 90.

```
_____ score _____ 90 _____
print("Grade A")
```

Problem 3 (2 points)

True or False: In nested if statements, the inner if statement will always execute.

Circle **ONE** answer:

TRUE FALSE

Problem 4 (2 points)

What will this code print?

```
age = 25
if age >= 18:
    if age >= 65:
        status = "Senior"
    else:
        status = "Adult"
else:
    status = "Minor"
print(status)
```

Problem 5 (2 points)

Out of the three code snippets below, circle every one that prints more than one line when **x=10**.

Circle **ONE** answer:

• **A**
if x > 5:
 print("A")
elif x > 8:
 print("B")

• **B**
if x > 5:
 print("A")
if x > 8:
 print("B")

| • **C**
if x > 8:
 print("B")
elif x > 5:
 print("A")
